EDUCATION

Masters of Science in Computer Science, *Montclair State University* (2024-2026)
- GPA: 3.83 / 4.0

Bachelors of Sciene in Biology, *State University of New York at Plattburgh* (2017-2021)
- GPA: 3.8 / 4.0

SKILLS

Languages & Core:
Java, TypeScript, JavaScript, Python, Kotlin, SQL, HTML/CSS

Front-End & Back-End:
React, Node.js, WebSockets, Java Jersey, RESTful APIs, Tailwind CSS

Data & Machine Learning:
PostgreSQL, MySQL, MongoDB, PyTorch, TensorFlow, Pandas

TECHNICAL EXPERIENCE

Tootie Frootie – *Real-Time Multiplayer Room Game*
- Architected a real-time full-stack multiplayer platform, building a Java WebSocket and Jersey backend to drive game sessions alongside a React TypeScript frontend.
- Engineered bi-directional communication via WebSockets, broadcasting real-time game state synchronization, custom event payloads, round transitions, and live score calculations across rooms.
- Designed modular Game Logic and Room Services backed by an in-memory H2 database, managing game lifecycle events, dynamic answer validation via peer voting, and ephemeral session state storage.

Cuenta – *Financial Tracking Website*
- Engineered a Java Jersey RESTful backend service to orchestrate double-entry transaction handling, category budgeting, and automated balance calculations.
- Designed a MySQL database schema with indexed relationships to ensure ACID compliance and efficient querying across user financial transactions and accounts.
- Developed a responsive JavaScript single-page application, utilizing Axios for asynchronous API communication and structured state management to render real-time financial summaries.

Mise En Plate – *Recipe App*
- Architected a secure Node.js/Express REST API, implementing token-based authentication (JWT, Passport.js, OAuth 2.0) with bcrypt password hashing and granular authorization for CRUD workflows.
- Engineered document schemas in MongoDB Atlas (NoSQL) to support flexible recipe structures, ingredient scaling, and indexed text search.
- Built an interactive React frontend, managing component-driven state to deliver search filtering, image uploads, and dynamic ingredient measurement recalculations.

WORK EXPERIENCE

Research Technician
Niethammer Lab at Memorial Sloan Kettering Cancer Center, New York, NY | 2021- 2023
- Served as the primary operational liaison for inter-lab collaborations, managed shared equipment and supplies, and guided compliance walkthroughs to keep daily workflows running smoothly.
- Optimized multi-step experimental workflows and root-cause troubleshooting across molecular assays, ensuring reliable data accuracy and dependable project milestones.
- Established standardized protocols to generate, validate, and maintain viable transgenic and CRISPR knockout models for long-term experimental analysis.

Laboratory Technical Assistant
Adirondack Health, Saranac Lake, NY | 2020 – 2021
- Processed SARS-CoV-2 specimens for PCR testing under tight diagnostic turnaround times.
- Performed preventative maintenance, root-cause troubleshooting, and quality control validation on the Rheonix platform to prevent testing downtime and ensure data integrity.
